

Low Voltage Fuses

European NH Knife-Blade Fuse System

SIBA LV Fuse-links with top and combination indicator are available in a large variety of voltage ratings, body sizes and operating classes:

Sizes: **000, 00, 0, 1, 2, 3, 4 and 4a**

Voltage ratings: AC 400 / 500 / 690 /
1000 / 1500 V
DC 220 / 400 / 440 V

Operation classes:	gG: Full range breaking capacity for general application
	gB: Full range breaking capacity for mining application
	aM: Partial range breaking capacity for motor circuit protection
	gTr: Full range breaking capacity for transformer protection
	gTF: Full range breaking capacity for general application

Standards: IEC 60269-1-2 / EN 60269-1-2
DIN VDE 0636 part 201
DIN VDE 0636 part 2011
DIN 43620

Approvals: Germany, Austria, Switzerland

Features / Benefits

- ▶ Combination indicator (top and center) for easy identification of blown fuses
- ▶ High interrupting rating up to 120 kA
- ▶ Voltage ratings AC 400 - 1500 V
- ▶ Operating classes gG / gB / aM / gTr / gTF available for all applications
- ▶ Fuse-bases and accessories available, made of sheet steel base plate with ceramic support
- ▶ Low power losses and low temperature rise
- ▶ All fuse-links are entirely corrosion resistant
- ▶ Gripping-lugs: metal/live for standard application, metal/insulated for increased safety

Low Voltage Fuses

European NH Knife-Blade Fuse System

General

User's demands for maximum service reliability in low voltage networks, coupled with effective and economic operation, places considerable quality requirements on the protective gear in these networks.

The continuous improvement of a line protective gear, especially the advances in development and quality of SIBA LV-fuse-links, means that these are always installed in places where feeders are to be protected efficiently, reliably and economically.

When suitably adapted to the line, SIBA LV fuse links guarantee maximum protection against all faults which may arise in practice.

The protection covers the range of small overcurrents as well as maximum short circuit currents.

Design

The main parts of the fuse-link, the SIBA selective fuse elements, are directly connected to the knife contacts by spot welding. The body suits is made of high quality ceramic, and the design the individual load conditions and consequently guarantees faultless operation.

SIBA's standard design of fuse-links are manufactured with a combination indicator.

Current limiting

The thermal and dynamic capacity of electrical switchgear components is determined by the peak value level of the prospective short circuit current I_s . The level of this peak short circuit current I_s is a cer-

tain value of the prospective current I_p (sym.r.m.s.), depending on the moment of energizing and the value of the d. c. component of that short circuit.

High short circuit currents do not rise up to their peak value when SIBA LV-fuse-links of a corresponding rated current are used. The current limiting effect starts at melting times of less than 5 m. s.

The current limiting diagram shows the behaviour of the prospective short circuit current I_s depending on the prospective current I_p (sym.r.m.s.). The coherence between the prospective current I_p (sym.r.m.s.) and the efficiency of current limitation (cut off current I_D) by SIBA LV-fuse-links, is given by the more level lines for the various fuse rated currents.

Time-current characteristics

The time-current characteristics for LV-fuse-links type gG are represented as „medium characteristics curves“. These are within the cutoff range stipulated by VDE 0636/201. Maximum deviation in the current coordinates is $\pm 7\%$.

Low Voltage Fuses

European NH Knife-Blade Fuse System

The discrimination between two fuse links of different current ratings can only be determined when considering the service voltage. The degree of discrimination in radially operated systems of 1:1.6, as well as the use of fuse links of the same rated current in meshed networks, is only applicable at service voltages $1.1 \times U_N / \sqrt{3}$.

required during such operation is safely achieved by SIBA LV-fuse-links type aM at low cut-off currents.

gTr

SIBA LV-fuse-links of duty gTr are with a specific curve adapted to the load characteristic of the transformer. Therefore better utilization of the overload capacity of transformers is achieved. SIBA transformer-fuse-links are capable of carrying 1.3-times the current rating of a transformer as a continuous load for minimum 10hrs. The fuse operates within 2hrs., at 1.5-times the current rating of the transformer. Characteristic corresponds to VDE 0636/2011.

gB

SIBA LV fuse links of duty gB have been developed to protect underground installations of the mining industry, taking into consideration the particular operation and safety conditions.
Characteristic corresponds to VDE 0636/2011.

Arc voltage

The arc voltage is considerably below the values specified in VDE 0636/201.

aM

Because of their specific characteristic, SIBA LV-fuse-links of category aM are suitable for the protection of switchgear in motor feeders.

The specific design of the melting element guarantees reliable service in the limited range of the switchgear.

In the range above 4-times the rated current, SIBA LV-fuse-links aM protect the thermal overcurrent relays, while during short circuits, welding at contactor contacts is avoided because of extremely fast opening of the fuse links. The high breaking capacity
